

VAUBAN GLACIS PLANNING TEMPLATES

The following pages have a set of templates that can be used to plan out your Vauban Fortress. The outline of all the pieces available in PaperTerrain's Vauban City Walls sets are included. You can print out these sheets, cut out the templates and then fit them together as you like to see what your fortress will look like. This will help you to decide which of the kits you will need to build your fortress.

If you print out these pages at 100% size they will be the size of the 15mm scale kits.

If you print at 75% size they will be the size of the 10-12mm scale kits.

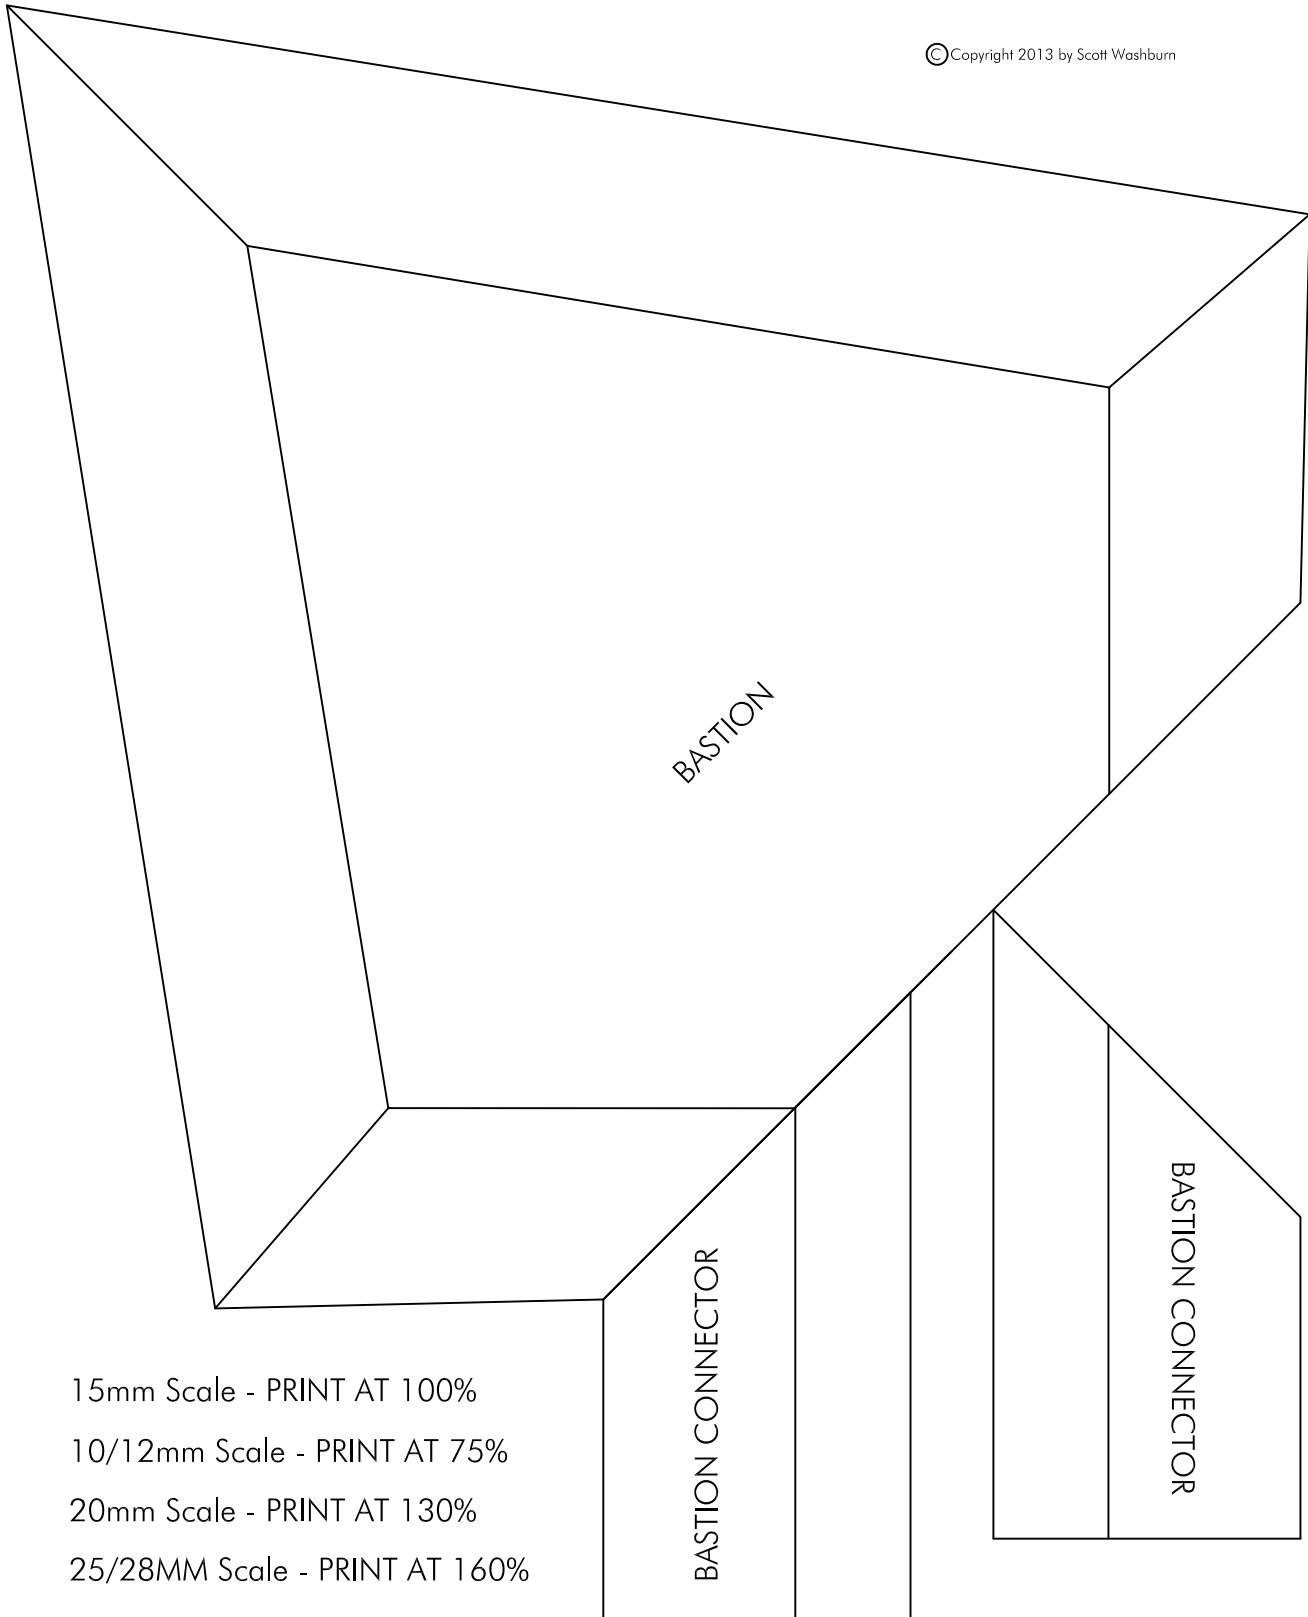

If you print at 130% size they will be the size of the 20mm scale kits.

If you print at 160% size they will be at the size of the 25-28mm scale kits. (Note that at that size they won't fit on a standard piece of 11 x 17 paper. You will need to print out at 100% size, cut out the peices and then blow them up individually or in small groups.)

Note that the Glacis piece from the Vauban Our\ter Works set comes in two pieces that must be glued or taped together.
